Conflict Styles (Harmonics)

WHEN I DON'T GET WHAT I WANT:

Competency	64 [5]	
Positive Outlook	21	
Reactive	14	

Reality Distortion

Levels of Integration

OVERALL: HIGH

This measure is made up of 20 Type specific questions. We measure how your client see their blindspots, see and overcome their fixations, triggers, defences, access both lines with growth strategies or stuck strategies, integration of their shadow through paradox and polarity, contemplation of essence, virtues, holy ideas. Your client might be highly functional, healthy, happy and still score lower on Integration. Integration, Self-Awareness and balance is a lifelong journey of growth.

Consistency and Reliability

Steven's responses to similar items were only somewhat consistent. As the client responded differently to comparable items, the results may not be very reliable. This may be as a result of the speed at which the client worked, interruptions while completing the test, an impulsive or random response style or language challenges. You are encouraged to verify the results during your debriefing session by prompting for behavioural examples and reflecting on behaviour during the session itself. If Steven struggles to identify with the report content the suggestion is to request a retest to improve the reliability of the results.

Honesty

Steven reported being very honest in completing this questionnaire. This will impact positively on the quality of the results and the extent to which Steven is able to relate to the report.

Duration of Testing

Session Started	13 Apr 2022
Session Ended	13 Apr 2022
Elapsed Time	46 minutes

Steven completed the questionnaire in an average amount of time. It is therefore unlikely that the amount of time spent on answering the questions would have detracted from the accuracy of the results.
